## About Me

Enthusiastic front-end developer specializing in HTML, CSS, JavaScript, Angular and React. Proven collaborator with a keen eye for detail, dedicated to crafting visually engaging user experiences. Ready to contribute creativity and technical skills to enhance web development projects.

## Experience

● **MEA(R)N Stack Development**

  **Lumiar Technolab Kochi**

  **2023 AUG-Present**

  - Implement intuitive user interface, state management using libraries like Redux.
  - Collaborated with senior developers to implement responsive front-end features, enhancing user experience.
  - Successfully integrated RESTful APIs to fetch and display dynamic content, improving application functionality.

## Projects

● **Weather App : https://subith-weatherapp-task.netlify.app**

  Technologies Used**: React**

  **About**

  Developed a responsive weather application using React, integrating real-time data APIs to provide users with accurate and visually appealing weather forecasts.

● **Clone App : https://subith-netflix-clone.netlify.app**

  Technologies Used**: React**

  **About**

  *Built a Netflix clone application using Angular, incorporating responsive design, dynamic content retrieval from a backend API, and implementing user authentication to deliver an immersive and interactive platform for browsing and exploring multimedia content.*
